## Problem 3.12

(a) Table of frequencies of the tones of the octave beginning with middle C, assuming that the A is above middle C is tuned to 440 Hz:

| Note Name   | $C_4$      | C#    | $D_4$      | $E_4^b$ | $E_4$   | $F_4$ | $F_4^{\#}$ |
|-------------|------------|-------|------------|---------|---------|-------|------------|
| Note Number | 40         | 41    | 42         | 43      | 44      | 45    | 46         |
| Frequency   | 262        | 277   | 294        | 311     | 330     | 349   | 370        |
| Note Name   | $F_4^{\#}$ | $G_4$ | $G_4^{\#}$ | $A_4$   | $B_4^b$ | $B_4$ | $C_4$      |
| Note Number | 46         | 47    | 48         | 49      | 50      | 51    | 52         |
| Frequency   | 370        | 392   | 415        | 440     | 466     | 494   | 523        |

(b) Formula for frequency f as a function of the note number n:

$$f(n) = 440[2^{\left(\frac{(n-49)}{12}\right]}]$$

(c) The spectrum has the form (frequency, amplitude) as:

$$[(-440, A_3), (-370, A_2), (-294, A_1), (294, A_1), (370, A_2), (440, A_3)] \\$$

The coefficients must have similar magnitudes, phases may be different to sound like a musical chord.

## $\underline{ Spectrum\ plot}:$
